

# **“Strategies to Increase Diabetes Screening Among Asian American Populations”**

**Session 1**

**An Overview of Diabetes Prevalence  
Among AA Populations**

**March 8th, 2021**

**10-11:30am HT | 12-1:30pm PT | 3-4:40pm ET**

# Zoom housekeeping

# Moderators

**Sakura Miyazaki**

Program Manager, Training and Technical Assistance  
Association of Asian Pacific  
Community Health Organizations

**Jen Lee**

Deputy Director  
Association of Asian Pacific  
Community Health Organizations

**Albert Ayson, Jr.**

Associate Director, Training and Technical Assistance  
Association of Asian Pacific  
Community Health Organizations

# About AAPCHO

The Association of Asian Pacific Community Health Organizations (AAPCHO) is dedicated to promoting **advocacy, collaboration,** and **leadership** that improves the health status and access of Asian Americans (AAs), Native Hawaiians (NHs), and Pacific Islanders (PIs) within the United States, the U.S. territories, and the Freely Associated States

# Our Impact

**650,000 Patients** at **28 Federally Qualified Health Centers**

**1.3 Million AAs, NHs, and PIs served** at health centers

# Learning Collaborative Overall Objectives

- Increase **knowledge** regarding the health challenges and disparities for AA populations with respect to diabetes and prediabetes.
- Learn the diabetes **screening guidelines** as it pertains to AA populations.
- Identify appropriate **screening protocols** for AA patients at their health centers.
- Understand the direct and indirect **implications** of implementing screening protocols for AA populations.

# Overview of Learning Collaborative

- Four 90-minute sessions every Monday
  - **Session 1: Overview of Diabetes Prevalence Amongst AA Populations**
  - Session 2: Diabetes Screening Guidelines for AA Populations
  - Session 3: Implementing Diabetes Screening Protocols for AA Populations at Health Centers
  - Session 4: Direct and Indirect Implications of Implementing Screening Protocols
- The panelist presentations will be recorded and shared publicly, but the discussion sections will not be shared.

# Your Interests, Needs, and Expectations

Key themes:

- Culturally appropriate approaches in working with AA subpopulations
- How diabetes impacts subpopulations differently
- Patient support post-screening
- Sharing of best practices

# Today's Learning Objectives

- To increase knowledge regarding the unique diabetes challenges of AA patients
- To identify and foster discussion regarding the needs of AA patients who are at-risk/prediabetic/undiagnosed

# Panelist

## **Alka Kanaya, MD**

- Professor of Medicine, Epidemiology and Biostatistics at the University of California, San Francisco (UCSF) in the Division of General Internal Medicine
- Expert in type 2 diabetes and cardiovascular disease prevention and focused her research on AA health disparities
- Bachelor of Science degree in Biochemistry from the University of California, Davis and an M.D. degree from UCSF
- Leads the Mediators of Atherosclerosis in South Asians Living in America (MASALA) Study

# Agenda

- Introductions
- Dr. Kanaya's presentation
- Q&A/Discussion
- Assign homework and preview of next session

# Poll

Which of the following best describes your organization type?

- Community Health Center (FQHC, Look-Alike)
- Primary Care Association (PCA)
- National Training & Technical Assistance Partner (NTTAP)
- Health Center Controlled Network (HCCN)
- Government
- Academic Institution
- Social Service or Community-Based Organization (CBO)
- Other

On a scale of 1-5, how familiar is your organization with the screening needs/guidelines for Asian Americans at risk of diabetes?

# Introductions

- Name
- Pronouns
- Organization
- Position
- Favorite comfort food

# Diabetes in Asian Americans

---

**ALKA KANAYA, M.D.**

PROFESSOR OF MEDICINE, EPIDEMIOLOGY & BIostatISTICS

UNIVERSITY OF CALIFORNIA, SAN FRANCISCO

# U.N. Subregions of Asia: 48 countries

Asia: Eastern Asia Central Asia Western Asia Southeastern Asia Southern Asia

# 'Asian Americans'

East Asians, South Asians, Southeast Asians from 23 countries

---

## Census 2010

Total "Asian":  $\approx$  14.7M (5%)

Asians  43% from Census 2000

Top three Asian subgroups:

- Chinese: 3.3M
- Asian Indian: 2.8M
- Filipino: 2.6M

## ACS 2018 estimates

Total "Asian":  $\approx$  18.4M (5.6%)

Asians  20% from Census 2010

Top three Asian subgroups:

- Chinese: 4.2M (21%)
- Asian Indian: 4.2M (33%)
- Filipino: 2.9M (10%)

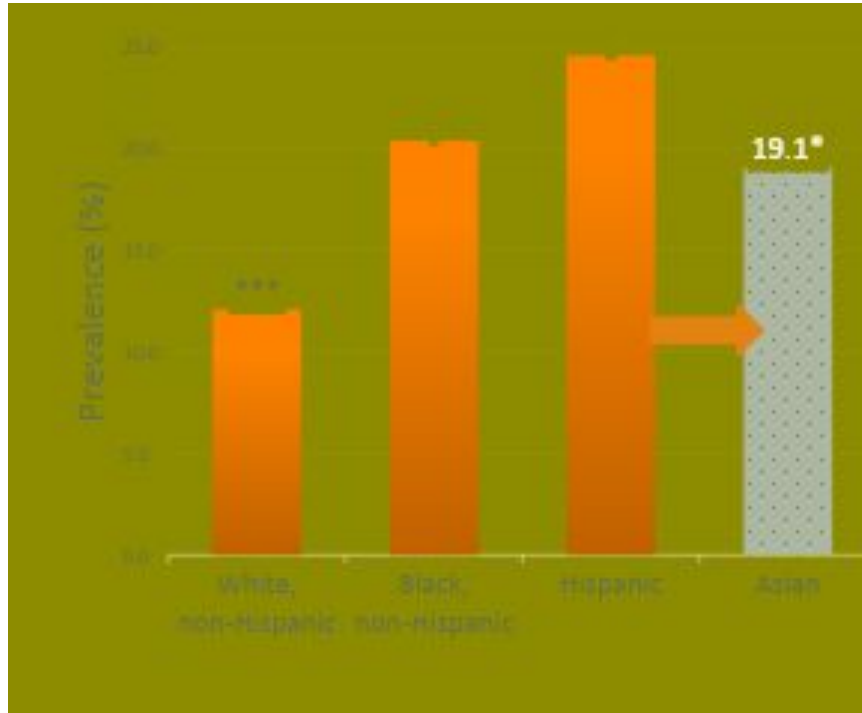

# Roadmap

---

1. How much diabetes exists among Asian Americans?
2. Why so much in some groups?
3. How can we prevent diabetes?

# Diabetes in the United States

## NHANES 2011-2016

\*  $p < 0.05$ , \*\*  $p < 0.01$ , \*\*\*  $p < 0.001$

# Diabetes in the United States

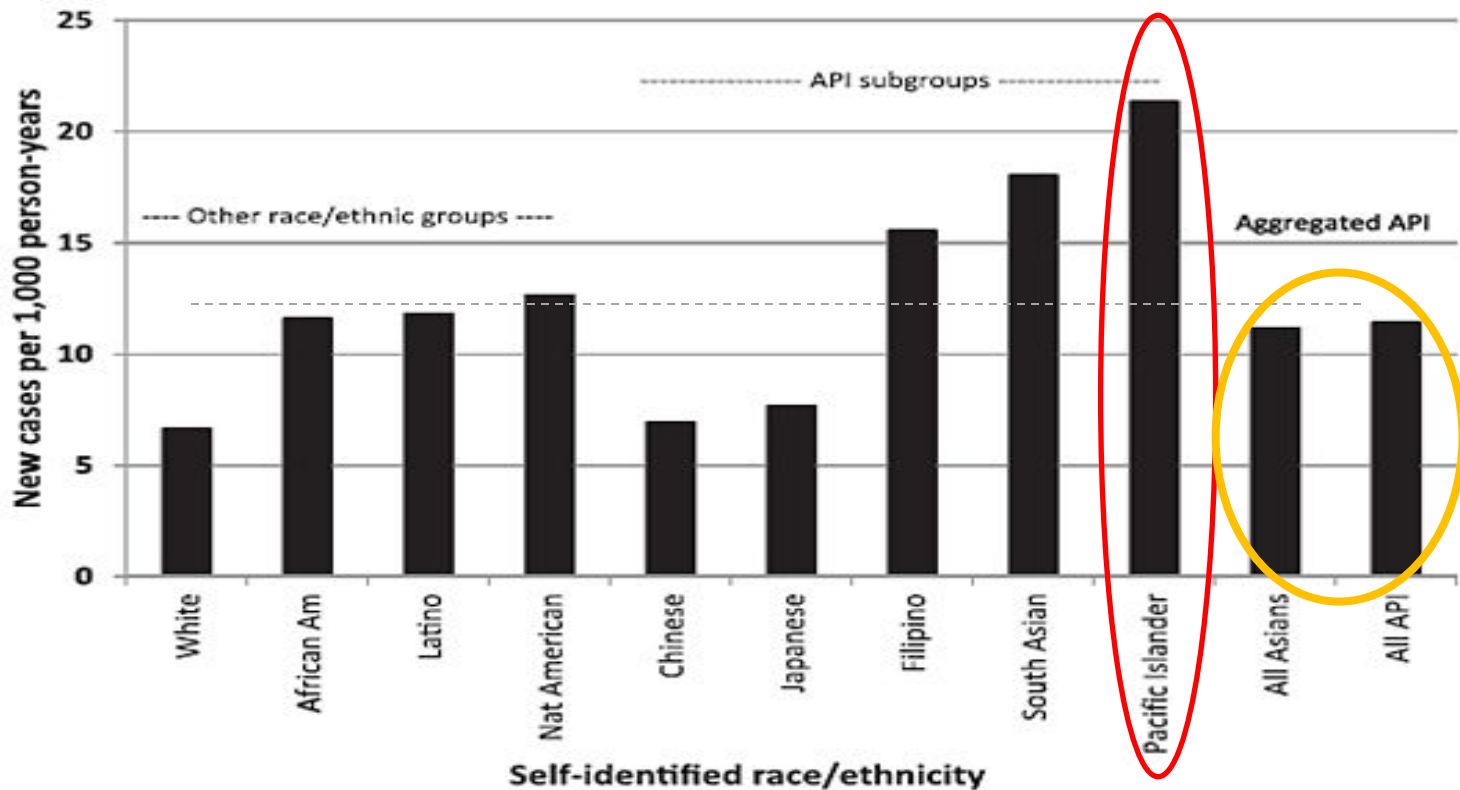

## NHANES 2011-2016

\*  $p < 0.05$ , \*\*  $p < 0.01$ , \*\*\*  $p < 0.001$

# Diabetes Incidence (per 1,000 Person-years), Kaiser Permanente Northern California, 2010

*Elevated rates of diabetes in Asian subgroups*

# Asian Americans have the highest prevalence of undiagnosed diabetes (51%), NHANES, 2011-2012

# Why so much more diabetes?

---

1. Genetics?

# Diabetes genes

Florez; Diabetologia, 2008;  
 Ramachandran, Lancet,  
 2010

# Why so much more diabetes?

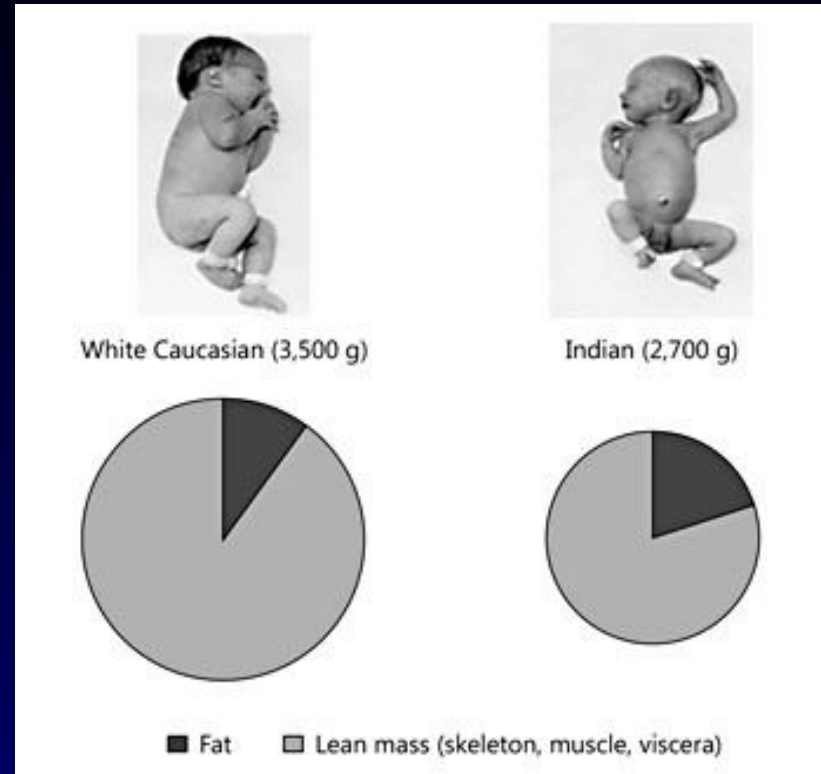

---

1. Genetics
2. Fetal development?

# Development of the Fetus

- ❖ Indian babies have lower birth weight from fetal undernutrition
- ❖ But, they have still have higher body fat!

# Why so much more diabetes?

---

1. Genetics
2. Fetal development
3. Higher levels of insulin resistance and lower pancreatic function?

**M**ediators of  
**A**therosclerosis in  
**S**outh **A**sians  
**L**iving in **A**merica

**M**ulti-**E**thnic  
**S**tudy of  
**A**therosclerosis

# Adjusted diabetes prevalence

	South Asian n=799	White n=2,611	African American n=1,879	Latino n=1,493	Chinese American n=801
Crude prevalence, %	21.1 (18.3-24.0)	6.0* (5.1-7.0)	17.7** (15.9-19.4)	17.7** (15.7-19.6)	13.1* (10.8-15.4)
Fully adjusted†, %	26.7 (21.2-32.3)	6.3* (5.3-7.3)	16.4** (14.5-18.3)	14.4* (12.6-16.3)	16.0* (12.9-19.1)

\* p<0.05; \*\*p<0.001 compared to South Asians

†adjusted for age, sex, clinical site, education, family income, smoking, alcohol use, exercise, BMI, waist circumference, HDL-cholesterol, triglycerides, hypertension, and fasting insulin

# Higher levels of Insulin Resistance

# Lower levels of Beta cell function

Excludes those on diabetes medications

Adjusted for age, sex, BMI, waist circumference

\* p<0.05

\*\*p<0.001 compared to SA

# Yudkin-Yajnik Paradox

**BMI**

22.3

22.3

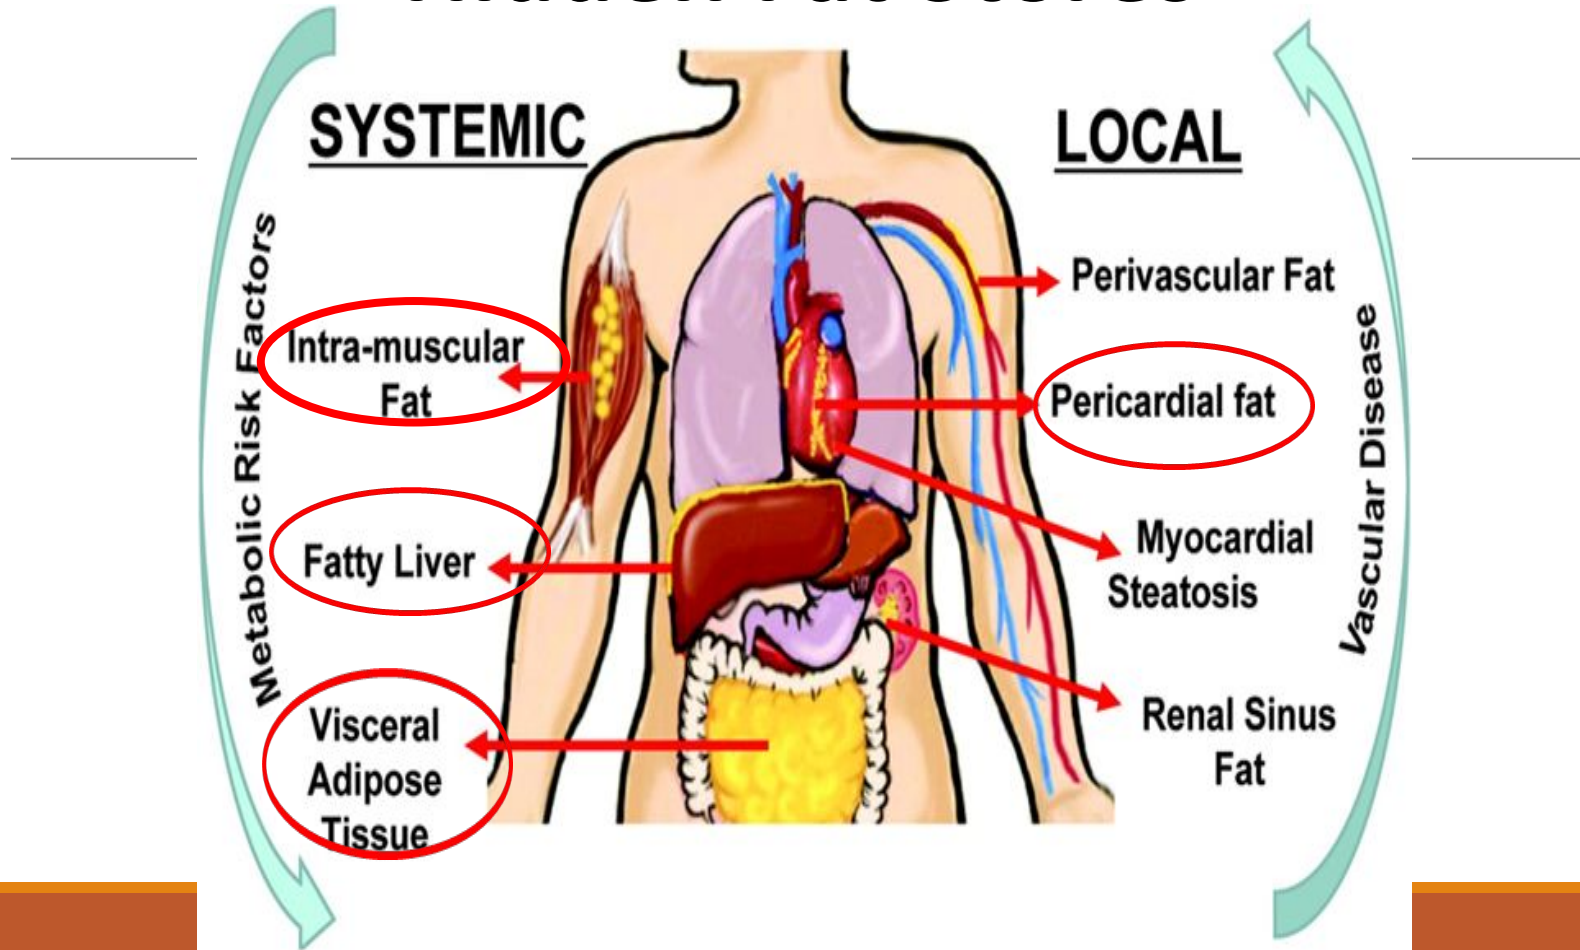

**Body fat**

9.1%

21.2%

Lancet, 2004

# Hidden Fat Stores

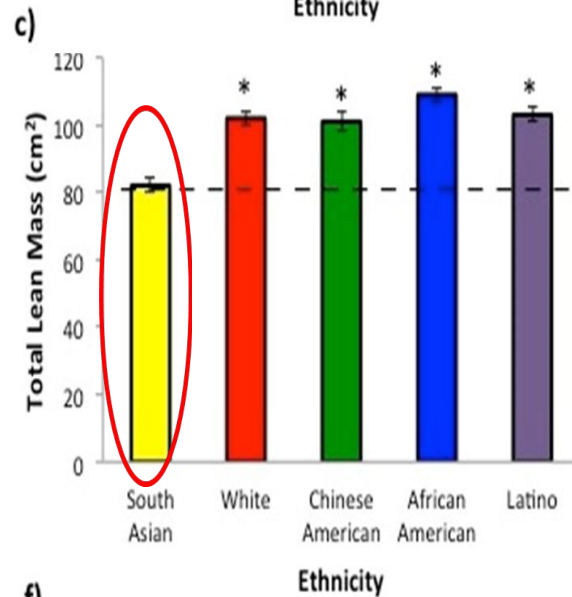

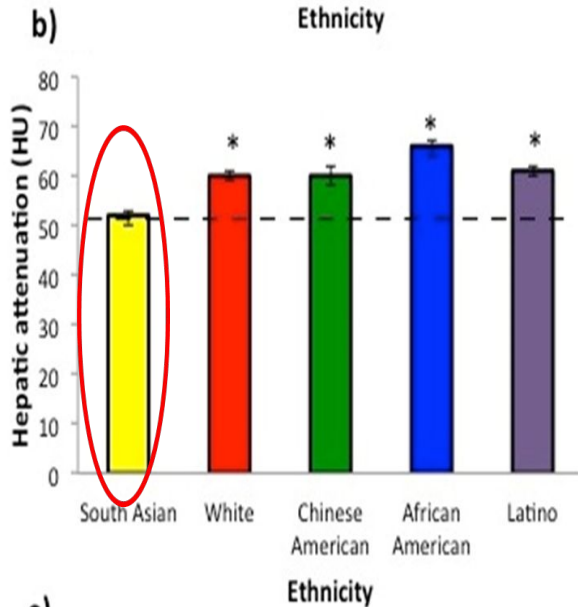

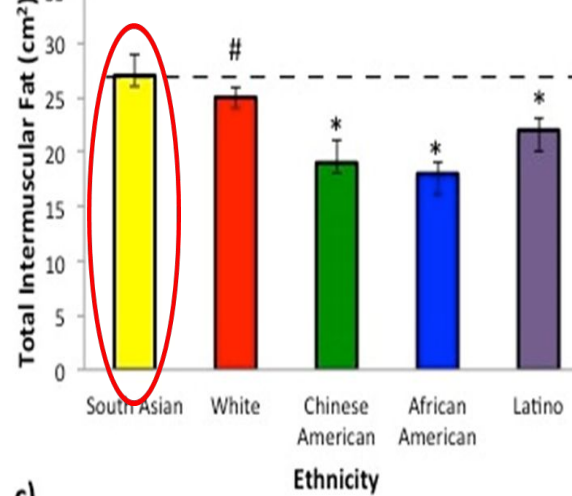

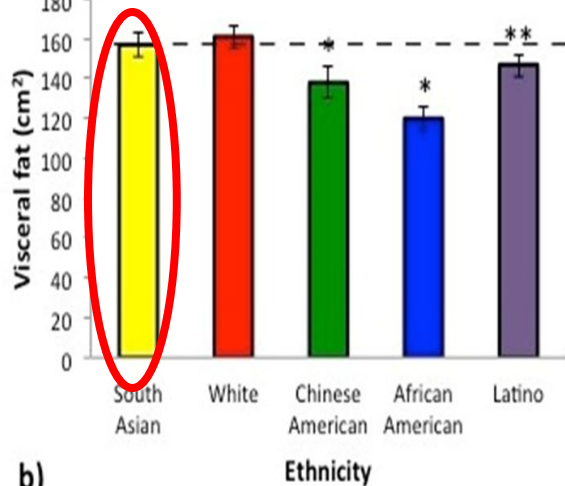

# Abdominal CT scans

---

# Fatty Liver

**South  
Asians  
Store fat in  
all of the  
wrong  
places**

# Why so much more diabetes?

---

1. Genetics
2. Fetal development
3. Higher levels of insulin resistance and lower pancreatic function
4. High amounts of body fat

# South Asian foods

# Three major dietary patterns in MASALA Study

**Animal  
protein**

**Fried snacks, sweets, and high  
fat dairy**

**Fruits, vegetables, nuts, and  
legumes**

**Both the Animal Protein diet and the Fried snacks, sweets, and high-fat dairy patterns**

**Linked with**

- Higher body mass index
- Higher waist circumference
- Higher total cholesterol
- Higher LDL cholesterol
- Lower HDL cholesterol
- Higher insulin resistance

**Fruits, vegetables,  
nuts, and legumes  
pattern**

- **Lower rates of hypertension**
- **Fewer risk factors for heart disease, diabetes, stroke (metabolic syndrome)**

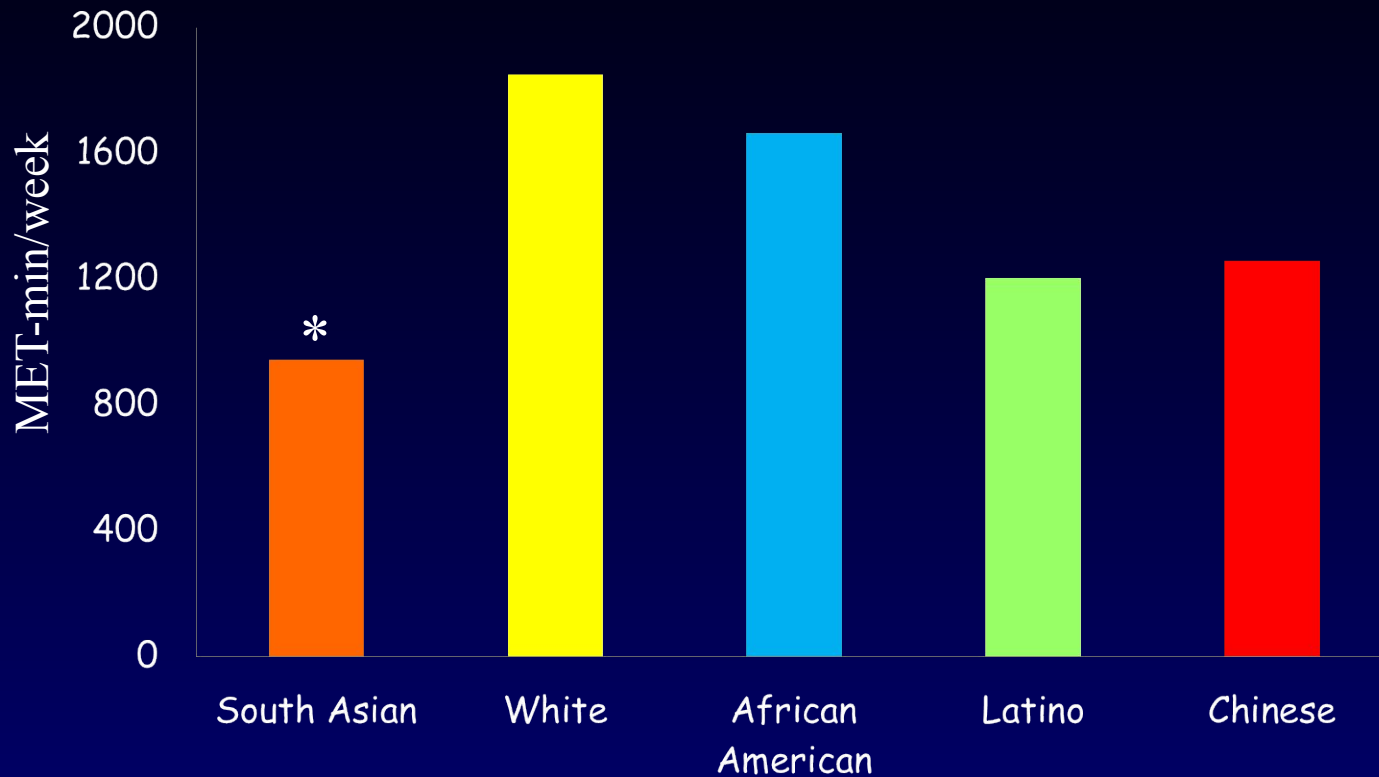

# Why so much more diabetes?

---

1. Genetics
2. Fetal development
3. Higher levels of insulin resistance and lower pancreatic function
4. High amounts of body fat
5. Adverse dietary patterns
6. Low levels of exercise

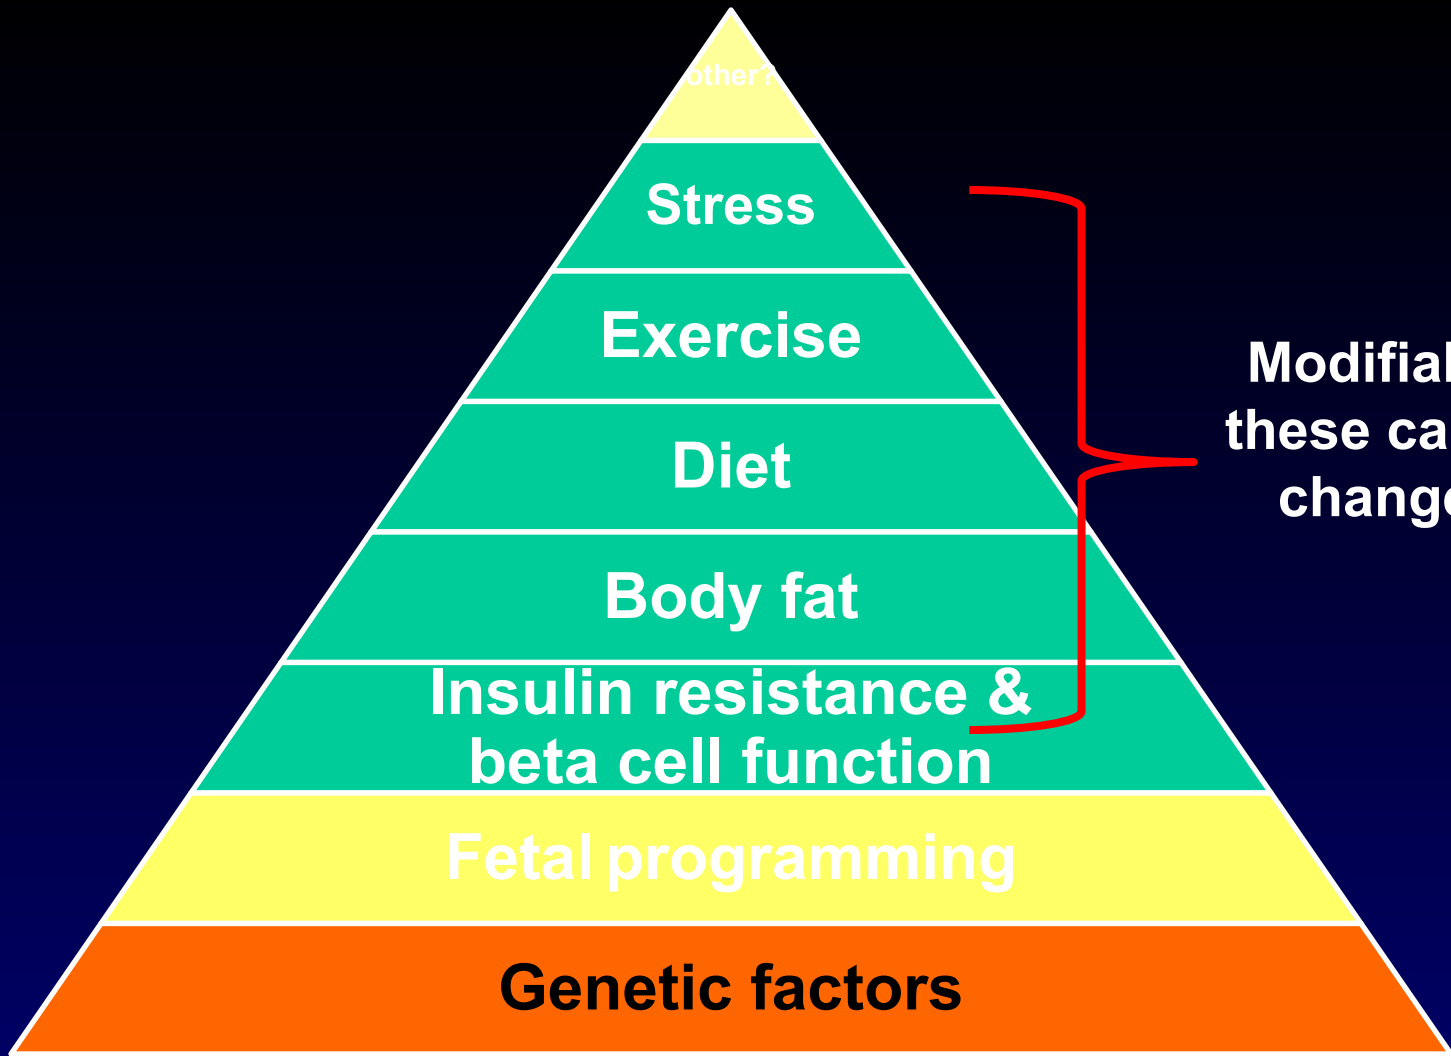

# Much Lower Exercise

# Why so much more diabetes?

---

1. Genetics
2. Fetal development
3. Higher levels of insulin resistance and lower pancreatic function
4. High amounts of body fat
5. Adverse dietary patterns
6. Low levels of exercise
7. Other factors (stress, environment, sleep...)

Thank you to our participants,  
study staff, investigators, and funders of MASALA!

Lung and Blood Institute

# Treatment of Diabetes

---

1. Nutrition
2. Weight loss
3. Exercise
4. Smoking cessation
5. Glucose control
6. Blood pressure control
7. Lipid control
8. Self-care practices

# Q&A

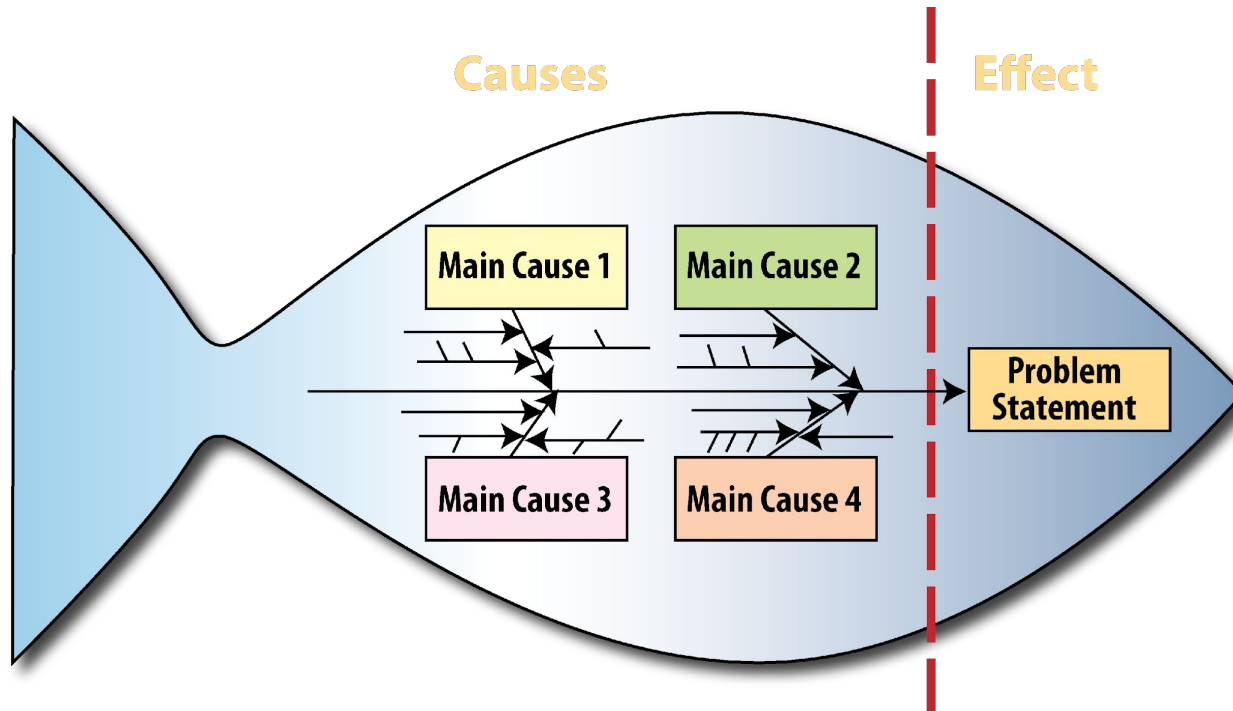

What is most challenging about increasing diabetes screening for your Asian American population at your health center/organization?

# Root Cause Analysis - The Concept

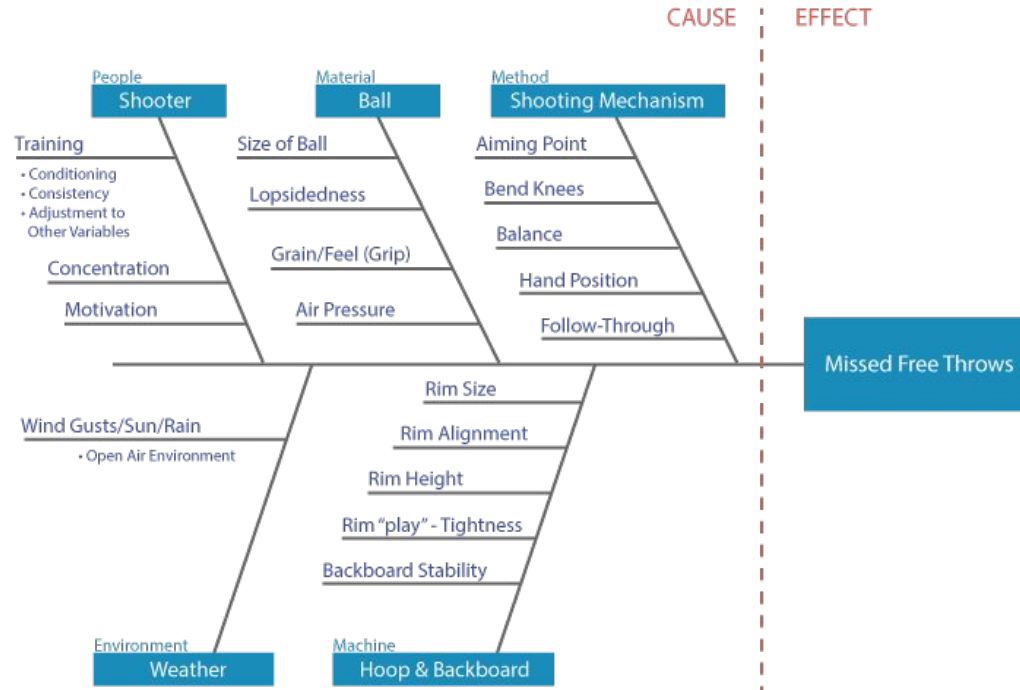

# Fishbone diagram

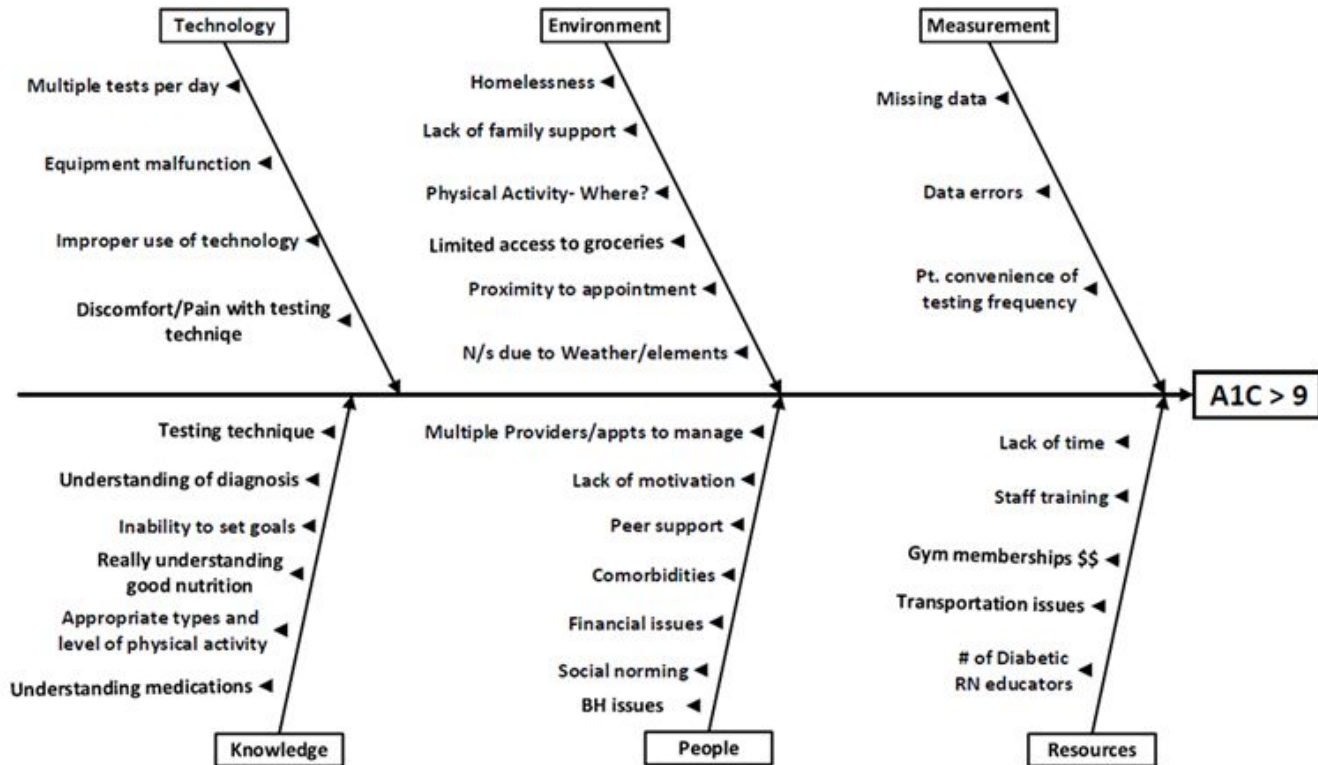

Source: AIDS Education & Training Centers, 2007

(Fishbone Diagram)

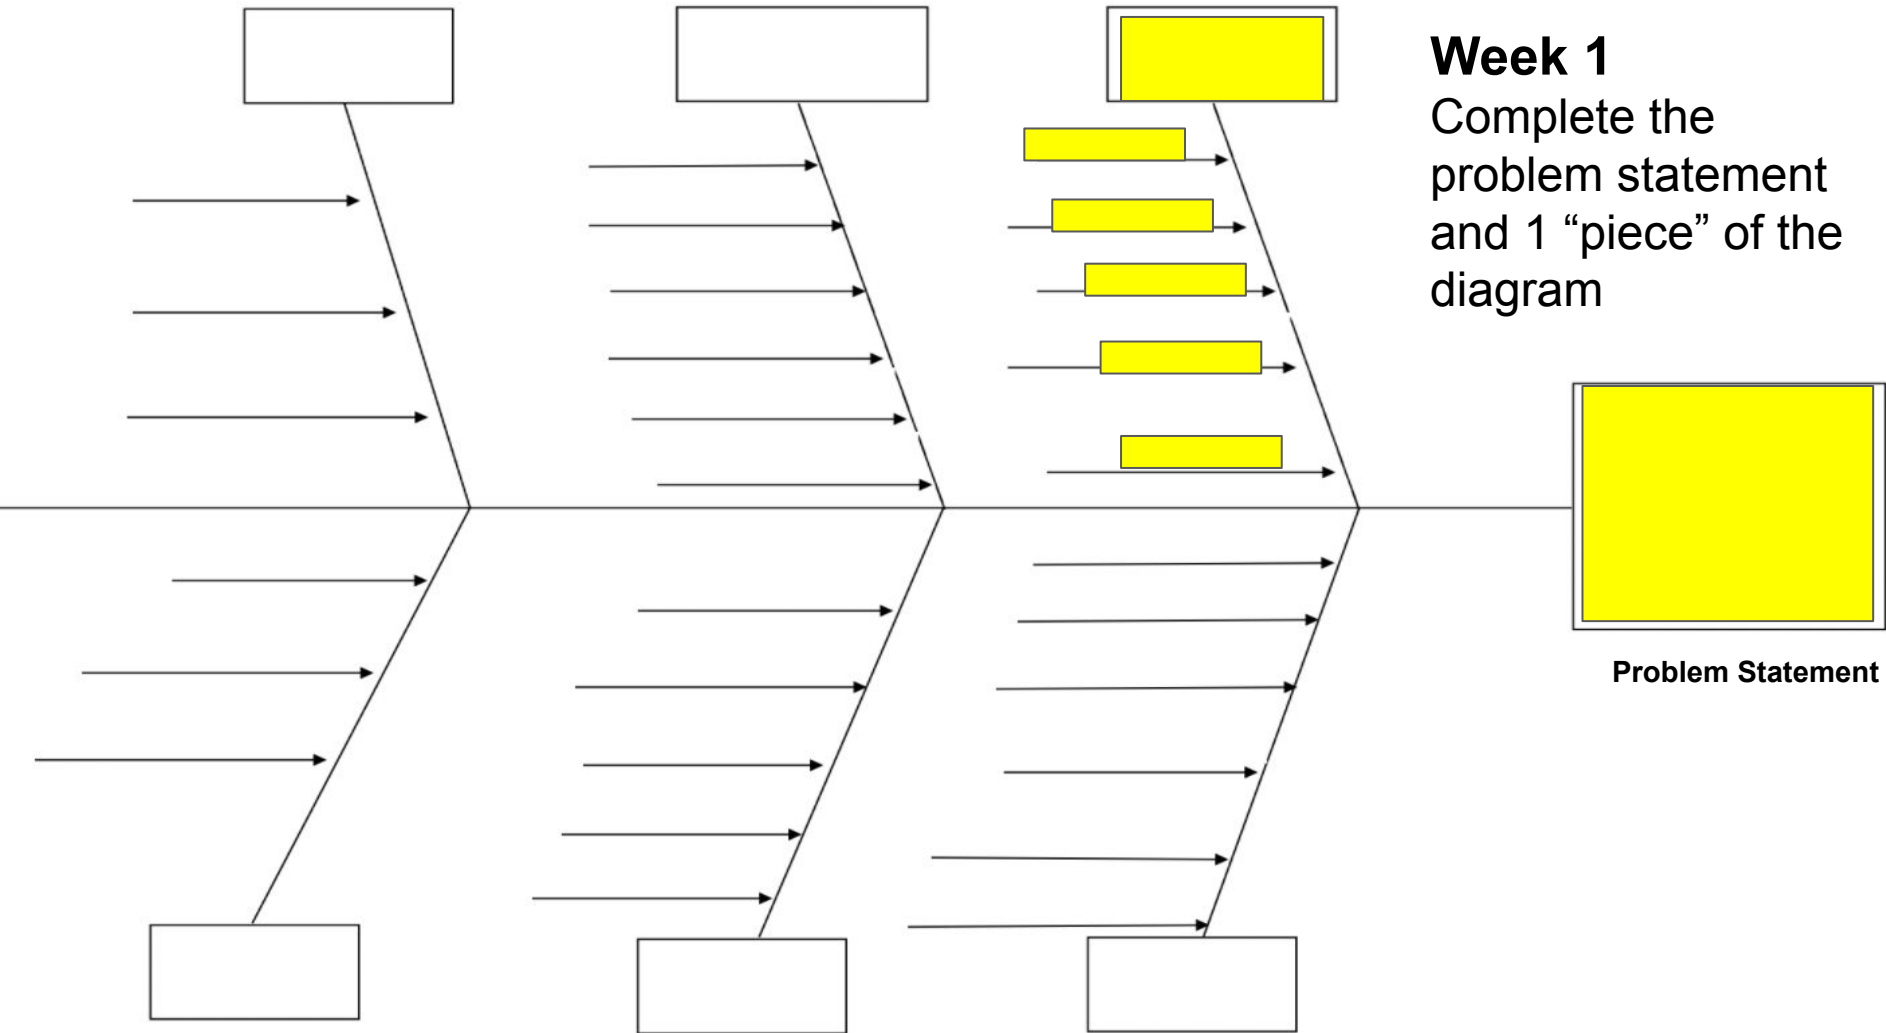

# Fishbone diagram

Source: [MoreSteam](#)

## Week 1

Complete the problem statement and 1 "piece" of the diagram

Problem Statement

# Upcoming: Session 2

- Monday, March 15th
- Same time (for participants impacted by Daylight Savings):  
**9-10:30am HT** | 12-1:30pm PT | 3-4:40pm ET
- Diabetes Screening Guidelines for AA Populations
- Panelists from Joslin Diabetes Center
- Complete the problem statement section and one “piece” of fishbone diagram before session 2

# Exit Poll

1. Overall, how satisfied are you with this session?
2. How confident are you that you will be able to apply information from this session at your health center/organization?
3. Based on your level of knowledge prior to the session, how would you rate changes to your knowledge as a result of the session?

# Exit Survey

Optional, but feel free to share your thoughts with us!

<https://www.surveymonkey.com/r/HTW729K>

Thank you!  
See you next Monday
